

# ABBI DINESH

Software Developer · Full-Stack · React · NestJS · TypeScript

abhidinesh0215@gmail.com | +91 798 996 8262 | Hyderabad, India | [linkedin.com/in/dinesh-abbi](https://www.linkedin.com/in/dinesh-abbi)

## SUMMARY

---

Software Developer with 3+ years of production experience building full-stack web applications, REST APIs, and AI-integrated platforms using React, TypeScript, and NestJS. Delivered systems now serving 10,000+ students across 4 engineering colleges and AI infrastructure running on 15-node GPU clusters. Proven ability to own features end-to-end — from database schema and API design to responsive UI — with a strong track record in code quality, testing, and shipping on time.

## EXPERIENCE

---

### Teleparadigm · Software Developer

Jul 2023 – Present Hyderabad, TG

- ▶ **Scaled multi-tenant platforms to 10,000+ users:** Built Trinetra and Sanchit — data distribution and analytics platforms deployed across 4 engineering colleges, featuring a 5-tier RBAC system (Admin, Director, HOD, Teacher, Student) and centralised student record management, reducing manual reporting effort by ~60%.
- ▶ **Shipped production AI infrastructure frontend:** Engineered the React + SuperTokens secure frontend for DrugParadigm, a drug-discovery AI system running inference on DGX GPUs; built monitoring dashboards and authored Playwright load-testing suites across a 15-node JupyterHub cluster, catching 3 critical bottlenecks pre-launch.
- ▶ **Delivered AI-powered EdTech product:** Built Tesseract — a multi-role assessment platform that auto-generates, assigns, and grades MCQs and assignments using AI — and Project School, a milestone-tracking system for student-mentor project management, both actively used in production.
- ▶ **Owned full development lifecycle:** Designed NestJS schema-driven backends, wrote REST APIs, implemented application security, and authored end-to-end test coverage with Playwright. Managed deployment and environment setup for all company products.
- ▶ **Built tablet-optimised PWA from scratch:** Developed VV Kaksha, a K-10 educational PWA with complex interactive mechanics (drag-and-drop puzzles, real-time feedback) optimised for low-powered tablet hardware.

## KEY PROJECTS

---

### Trinetra & Sanchit — Cross-Campus Enterprise Platform

Stack: React · Vite · NestJS · PHP · REST APIs · RBAC

- ▶ Multi-tenant platform live across KMIT, NGIT, KMEC, and KMCE; serves 10,000+ students with a 5-level role hierarchy and cross-campus analytics.
- ▶ Eliminated manual record-keeping by centralising student data, assignment tracking, and teaching-quality metrics in a single unified system.
- ▶ Implemented granular access control ensuring data isolation between institutions while enabling aggregated director-level reporting.

### DrugParadigm & Tantrik — AI Research Infrastructure

Stack: React · Vite · NestJS · SuperTokens · Playwright · JupyterHub

- ▶ Designed secure auth architecture using SuperTokens for sensitive drug-discovery AI models inferencing on DGX GPU servers.
- ▶ Wrote and executed comprehensive Playwright load-testing suites across a 15-node JupyterHub cluster; identified and resolved 3 critical performance bottlenecks before production launch.
- ▶ Built real-time monitoring dashboards giving researchers visibility into GPU utilisation and model inference queues.

### Tesseract & Project School — AI-Powered EdTech Suite

Stack: React · Redux · NestJS · Gemini API · REST APIs

- ▶ Built AI assessment engine that auto-generates contextual MCQs and assignments, auto-grades submissions, and provides role-specific dashboards for teachers, students, and admins.
- ▶ Shipped companion Project School app for milestone-driven project tracking; mentors can assign stages, review demos, and issue grades — all within a single interface.

Catalyst — AI Fitness & Hydration Tracker

Stack: React Native · Gemini API · Android · Push Notifications

- ▶ Cross-platform mobile app with custom UI/UX, adaptive icons, and push notification reminders for workout and hydration goals.
- ▶ Integrated Gemini API as an in-app conversational wellness coach that responds to user activity data in context.

TECHNICAL SKILLS

|                                                                                                                          |                                                                                        |
|--------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| <b>Languages</b> JavaScript, TypeScript, Python, C/C++                                                                   | <b>Frontend</b> React.js, Redux, Vite, Tailwind CSS, PWA, Responsive UI/UX             |
| <b>Backend</b> NestJS, RESTful API Design, Schema-Driven Architecture, Application Security, Server Deployment & Hosting | <b>Databases</b> PostgreSQL, MySQL (schema design, query optimisation, migrations)     |
| <b>Testing &amp; QA</b> Playwright (E2E & Load Testing), Git, CI/CD, Environment Setup                                   | <b>Mobile</b> React Native, Android Development, Mobile UI/UX                          |
| <b>AI Integration</b> Gemini API, AI feature development, JupyterHub infrastructure                                      | <b>Core</b> End-to-End System Architecture, Technical Documentation, Rapid Prototyping |
